Filter by interface

1. Match by incoming interface

Match: -i incoming_interface
Available for: INPUT, FORWARD and PREROUTING chains.
Example: *iptables -A INPUT -i wlan0 -j ACCEPT*

2. Match by outgoing interface

Match: -o outgoing_interface
Available for: FORWARD, OUTPUT and POSTROUTING chains.
Example: *iptables -A OUTPUT -o enp8s0 ACCEPT*

Note: It's good practice to permit traffic on the loopback interface (lo)
