RouterOS by Example

Understanding MikroTik RouterOS
Through Real Life Applications

Stephen R.W. Discher

Editor: Bruce Pinnell
Cover Design: Enrique Gonzales

INTRODUCTION **16**

Who or What is MikroTik? **16**

About The Author **18**

What is RouterOS? **20**

About This Book **20**

Chapter 1 - First Time Access **22**

WinBox **22**

Navigating WinBox **23**

Inside WinBox **25**

Safe Mode **25**

Example – Entering Safe Mode 26

Command Line Terminal Options **27**

Telnet and SSH **27**

Serial Terminal **27**

Example- Forgotten Password 28

Creating the Basic Configuration **31**

Example – Add an IP Address 35

Chapter 2 – User Management **36**

Example - User and Group Assignments and Policy 38

Chapter 3 – Upgrading and Downgrading the Operating System, Package Management **41**

Example – Upgrading the Operating System 42

Example – Downgrading the Operating System 45

Example – Upgrading using FTP 46

Example – Adding a Package 46

Example – Best Practice for Package Management 46

Chapter 4 – Router Identity **48**

Example – Setting the System Identity 49

Chapter 5 – System Time and the NTP Protocol **50**

NTP Client Setup **50**

Example – Setting Up the NTP Client 50

System Clock **51**

Example – Setting the System Clock Manually and Setting the Time Zone 51

Advanced NTP Server Setup **52**

Example – Enabling NTP Server 53

Chapter 6 – Backups 54

Example – Creating a Binary Backup 55

Example – Restoring a Binary Backup 55

Text Based Backups 57

Example – Creating a Text Export (text backup) 57

Example – Importing a Text Backup 58

Chapter 7 – Licensing 60

Example – Determining Your License Level 63

Example – Install a License 63

Chapter 8 – Firewalls 66

Connections 71

Two Ways To Control Access 74

Forward Chain 76

Address Lists 78

Example – The Basic Firewall 79

Chapter 9 – NAT, Network Address Translation 89

Source NAT 89

Destination NAT 91

Special Types of NAT Rules 94

Source NAT With Multiple Public IP Addresses 94

Destination NAT with Action Redirect 95

Example – A Simple Masquerade Rule..... 97

Example – Destination NAT for a Web Server on the Private Network with Port Translation..... 99

Example – Source NAT to Source Traffic From a Certain IP Address 101

Example – Destination NAT with the Action Redirect ..103

Service Ports - NAT Helpers 104

Connection Tracking (on and off) 105

Example – Disable Connection Tracking.....106

Tools – Torch..... 107

Example – Determining the Source of Traffic on a Network.....108

Chapter 10 - Bandwidth Limits 110

Simple Queues 110

Bursting 112

Example – Creating a Simple Queue for Computers in an Office Network.....116

Example – Creating a Queue for a Destination Host 118

Example – Create a Queue for Local Computers with Burst 120

Packet Mangling 122

Example – Packet Mangling Using Optimum Mangle ... 122

Traffic Prioritization 126

For Further Study: QOS **127**

Example – Queue Priority for VOIP Traffic 127

PCQ – Per Connection Queuing 132

Example – Using PCQ with a Simple Queue, One Limit to All 133

Chapter 11 – Tools 138

Bandwidth Test Utility 138

Example - Bandwidth Test Utility 139

Monitoring Tools 141

Torch 142

Example – Using Torch to Troubleshoot "Slow" Networks 144

Traffic Graphing 145

Example – Configure a Graph for all Users in a Subnet 147

SNMP – Simple Network Management Protocol 150

Chapter 12 – Local Area Networks 152

ARP 153

Example – Create a LAN that Requires Static ARP.....155

DNS 158

Example – Configure DNS Client and Caching DNS Server 158

DHCP – Dynamic Host Configuration Protocol..... 160

DHCP Client..... 160

Example – Add a DHCP Client.....161

DHCP Server 162

Example – Create a DHCP Server 163

Example – DHCP Static Leases.....166

Example – DHCP Server Without an IP Pool 167

Hotspot – Instant Public Internet..... 168

Example – Set up hotspot 169

Example – Create IP Bindings.....172

Example – Create additional Users.....174

Example – User Profiles.....175

Example – Server Profiles.....177

Example – Walled Garden 179

Example – Creating a Custom Login Page.....180

Web Proxy 182

Example – Configuring a Transparent Web Proxy..... 183

Example – Http Firewall, Allowing or Blocking Certain Sites 187

Example – Redirect Users to Certain Sites 191

Example – Logging Web Traffic 193

Example – Logging to a Remote Syslog Server..... 194

Chapter 13 – Storage 197

System Stores 197

Example – Explore Stores 197

Example – Create a Store 198

Chapter 14 – More RouterOS Tools 200

Email Tool 200

Example – Configure the Email Tool..... 201

Example – Use a script With the Email Tool and Scheduler to Create and Send a Backup 202

Netwatch 205

Example – Reboot the Router Using Netwatch 205

Ping 206

Traceroute 207

Profile **208**

Chapter 15 – Wireless **209**

Wireless Theory **209**

802.11b **210**

802.11g **210**

802.11n **211**

Channelization – 2.4 GHz 802.11b/g/n **211**

Small Channels **214**

Bridged Versus Routed Access Points and Stations .. **214**

Routed **214**

Bridged **215**

Example – Configure an Access Point (PMP) With DHCP Server 215

Example - Initial Wireless Interface Configuration 216

Wireless Security **220**

Controlling Access with MAC Lists **221**

Example – Create an Access List on an AP 222

Example – Create a Connect List on a Station 223

Example - Encryption Using WEP **226**

Example – Encryption Using WPA(2) 228

Example - IP Addressing 230

Example – Configure a Wireless Interface to be a Routed Station (client) 231

Example – Create a Virtual AP 233

Bridging – Point to Point or Point to Multi Point 234

Example – Transparently Bridging a Link 235

Point to Point Links 238

Example – Pseudobridge Modes 239

Wireless Mode Station-pseudobridge 239

Wireless Mode Station-pseudobridge-clone 240

Example – Bridge a Station Using Pseudobridge 240

Supporting Mixed Clients, Routed Stations and Bridged Stations 242

WDS, Wireless Distribution System 243

Example – Build a WDS System 244

NV2- Nstreme Version Two 246

Example – Converting an 802.11n PMP System to NV2 246

Example – Hiding the SSID 249

Chapter 16 – Routing 251

Simple Static Routes 252

Most Specific Route **253**

Default Routes **254**

Example - Tying it All Together With Static Routes 254

Route Distance **257**

Dynamic Routes **258**

Routing Flags **259**

OSPF – A Dynamic Routing Protocol **260**

Link State Protocol **260**

Areas **261**

Configuring OSPF **262**

Example – Add a Static Route 263

Example – Add a Default Route 264

Example – Set up OSPF, the Basics 265

Chapter 17 – VPN Tunnels **268**

General **268**

Point to Point Addressing **270**

PPPoE – Point to Point Protocol over Ethernet, Applying PTP Addressing **272**

Example - IP Pools 274

Example - PPP Profiles 275

Example – Create a PPPoE Server 276
Example – Create a User (Secret) 278
Example – Create a Client Profile 278
Example – Create a PPPoE Client 280
PPTP and L2TP Tunnels 282
Example – Create a PPTP or L2TP Server 283
Adding Routes for Tunnels 283
Configuring L2TP Server 285
PPP Status Tab 285
Bridging Tunnels 286
Example – Create a Bridged EoIP Tunnel 286
Example – Create a VPLS Tunnel 288
Near End of Tunnel 288
Far End of Tunnel 290
Chapter 18 - Conclusion 293
