EXPLOITATION OF VULNERABILITIES

▪ This phase involves using techniques that allow the analyst to exploit an identified vulnerability to gain some advantage from the perspective of an Ethical Hacking exercise.

▪ It corresponds to one of the most important and intrusive phases of the Ethical Hacking process.

▪ The organization's protection and detection tools must be carefully considered, including: Anti-Virus, EDR, IPS, IDS, HIDS, WAF, and others.

EXPLOITATION OF VULNERABILITIES

- Depending on the technological component where the vulnerability is located, we will divide the exploitation phase into:

  - Exploitation of Vulnerabilities in Hosts

  - Exploitation of Vulnerabilities in Web Applications

  - Exploitation of Vulnerabilities in Networks
